ABSTRACT

The project entitled “Online Bus Pass Registration / Renewal” is developed using Active Server Page.Net as Front end and MS SQL Server as back end. Bus pass registration is useful for passengers who are facing problems with the current manual work of bus pass registration and renewal. His/her renewal or registration can be done through credit card. In the manual system the user has to go on particular date and time if they fail then the renewal cannot be done. This online bus pass registration application will help candidates to save their time and renewal bus pass without standing in a line for hours near counters. Initially uses need to register with the application by submitting their details through online. The administrator will verify the candidate details and if they are satisfied they will approve bus pass. The candidate can login with their username and password and renewal is performed. The renewal process is carried by paying the money using the credit card. The candidate can give their valuable feedback for further enhancement of this project.

1. INTRODUCTION

This project is created to provide “safe, reliable, saving, efficient and affordable” services for user. This idea would help the user in a better way. As per the previous system the user had to do each and every process manually, but this system helps user to make the work bit faster. The user can then take print out of this bus pass from their mail id and use them. The bus pass will be differ for different types of users. In this bus pass, all the required details such as candidate name, address, date of birth, mail id, name of the school (government/private), validity period, amount paid (free for government school students) and photo copy of the candidate are provided. Instead of school details, working organization details will be provided in employees bus pass. The renewal process can be done either monthly or yearly as per user wish. Based on that renewal period amount will be deducted.

2. EXISTING SYSTEM

In the existing system bus pass registration and renewal process are carried out manually. The person has to visit the counter and have to submit the details and then they have to wait for approval. For each and every process there is time limit specified if the person fails to go on time then all the transactions will be cancelled. In this existing system was used to bus details maintain through file. And after bus information are stored to computerize. The Project Metrics has to enter all the details of project, documents, and tasks. And, also the maintenance team information and also efforts estimation. For this purpose the organization maintain the size of the document, source code and update the information about team member’s details manually. Which is much of time consuming process and more importantly it is error prone. At present system bus pass collect from depot very rare one. User can facing lot of problems.
Disadvantages

- It is time consuming
- It consumes lot of manpower to better results
- It lacks of data security
- Retrieval of data takes lot of time
- Percentage of accuracy is less
- Reports take time to produce

PROPOSED SYSTEM

The proposed system overcomes the drawbacks in the existing system. In the proposed system user register their details through online and get their unique username and password for further processing. The bus pass will be differ for different types of users. In this bus pass, all the required details such as candidate name, address, date of birth, mail id, name of the school (government/private), validity period, amount paid (free for government school students) and photo copy of the candidate are provided. Instead of school details, working organization details will be provided in employees bus pass. The renewal process can be done monthly as per user wish. Based on that renewal period amount will be deducted.

A. Features of the Proposed System

- To make accuracy and efficient calculations. To provide proper information briefly
- To provide huge maintenance of records
- Flexibility of transactions can be completed in time
- Easily bus pass apply through online.
ARCHITECTURE OF THE PROPOSED SYSTEM

This process supports existing infrastructure requirements and provides specific recommendations for hardware and network solutions based on existing and projected user needs. Application requirements, data resources, and people within an organization are all important in determining the optimum hardware solution. It is represented using a three tier architecture that comprises of user interface, process management and Database Management System (DBMS). It shows the components of the system, the services they provide and the way they communicate to bring about the system’s functionality.

PRESENTATION OF THE APPLICATION INTERFACE (MODULES):

The presentation is based on the interface of the system and the outputs from the back end and the application interfaces consist of various windows that enable different categories of users to interact with the system. This includes some of the user’s details forms and their respective outputs. 

Homepage Interface: 

The home page of the system shows various menus of the application. It also shows login link for already existing users at the top of the application and a link for a new user to register quickly. The number of the menu depends on the role of the user. The forms were developed using Asp.net and SQL Database. Different forms were developed to enable the users perform the following tasks:

User’s login, Register the user by capturing personal information, Username and password is given in the login page, if the user is new then they will register their personal details.

User Register Page: 

The user registration process of this project consists of five different user data’s. The fields are like First Name, Last Name, Gender, Email-ID, User Name, Password and Mobile Number. This fields must be given at the time of registration. This form is succeeded only the user give the valid information, otherwise the registration process will not be done.

This user information should be stored in our database, which make the login process is easy one. If the registered user have their own username and password, that will also be stored in the database.
User Login Page:

Once the user successfully registers, then the particular user can directly access the Login page.

ADVANTAGES

- Passengers don’t have to waiting time in queue.
- Its mostly used for most of the employers.
- Information is accurate.
- It is a fast process.
CONCLUSION

Bus pass Registration and Renewal System Project is a real time project which is useful for the students who are facing problems with the current manual work of bus pass Registration and renewal. It also increases the validity period, frequently Warns to the student before completion of his validity period by website. His / Her Renewal or Registration can be done using a voucher or even by a credit card. This online bus pass registration application will help students save their time and renewal bus passes without standing in a line for hours near counters. Initially students need to register with the application by submitting details of photo, address proof, and required details and submit through online. They will verify your details and if they are satisfied they will approve bus pass. You can even renewal using credit card or other wire transfer methods.
